Ultra Workflow

Design Ultra Pipeline → Create a Dedicated Snaplex → Create an Ultra Task → Invoke the Ultra Task → Check Status

Pipeline Resume Workflow R1

Create a Pipeline in Designer → Select Resumable Mode → Execute the Pipeline → Failed endpoint: Pipeline is suspended → Check conditions in the Dashboard → Restored endpoint: Resume the Pipeline

Data Catalog Workflow

eXtreme Workflow

Build an eXtreme-mode Pipeline → Execute the Pipeline → Amazon EMR cluster starts → S3 data is read → Data transforms in Spark → Dataset is written to S3 → EMR cluster terminates

API Manager Workflow

Create APIs from your Pipelines → Create Proxies for Your APIs → Add Policies and Deploy → View Proxies in the UI or Open API Specification → Monitor Historical Usage and Latency
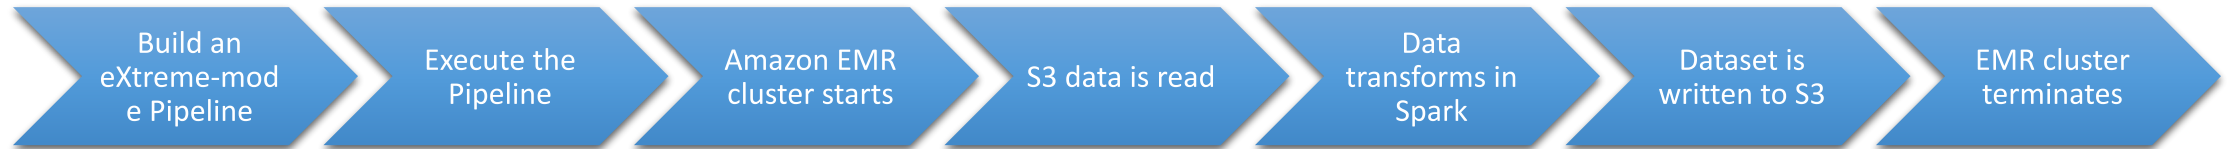

Triggered Task Manager Workflow

Design your Pipelines → Create URLs from Pipelines → Share URLs → Monitor Health, Usage, and Metrics

Scheduled Task Manager Workflow

Design your Pipeline → Create a Schedule for Pipeline Execution → Administrate Task Executions → Monitor Task Health and Track Metrics

API Consumer Workflow

Navigate to Developer Portal → Search for APIs → View API Details → Download API Specification and Use API

Add Slack to Notifications

Add Slack in Manager to your Org → Create SnapLogic Notifications → Add Slack Channels and Recipients → Receive SnapLogic Notifications through Slack

Developer Workflow

Design your Pipelines → Create Task URLs → Publish Tasks to API Developer Portal → Track Usage and Monitor Errors → Unpublish API and Improve → Republish Improved API
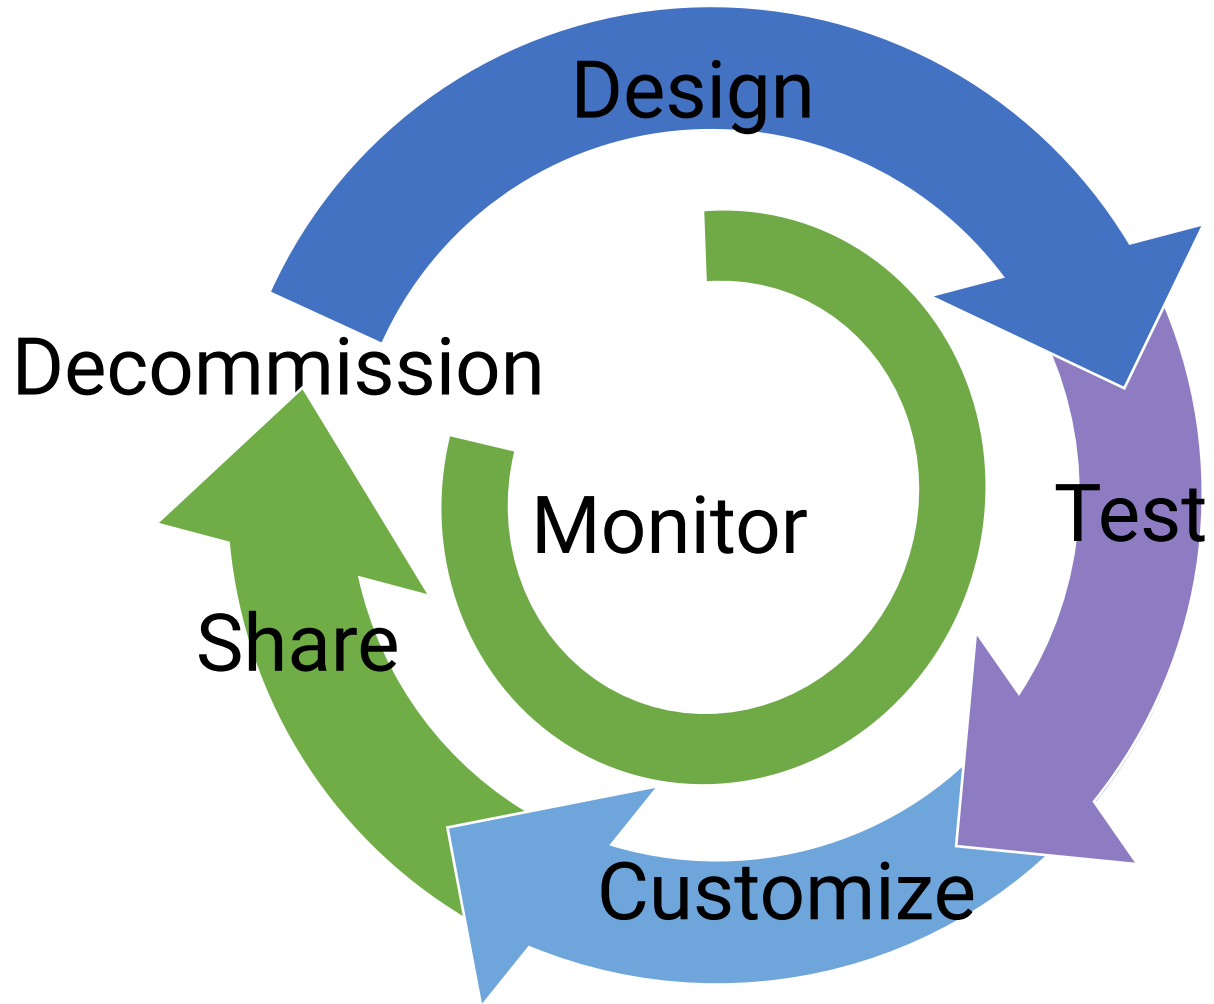

APIs in SnapLogic
