Paste the Account ID and the token id and token secret to SnapLogic, NS Token account. Account Validation will be successful.

Create a Pipeline with a Mapper snap>Netsuite Search object \* set to Employee The snap will tell you

platformCore:code=INSUFFICIENT\_PERMISSION, platformCore:message=Permission Violation: You need the 'Lists -> Employees' permission to access this page

This is because when we created the role, we only give is minimum access privileges

We did not give any data privilege. Could edit the role and add the privilege and regenerate the token id and secret.
